Manual Testing using Generative AI

1. Creating a Test Plan

Prompt:

"Generate a detailed test plan for a [web/mobile] application for [domain: e-commerce, banking, healthcare, etc.]. Include test objectives, scope, test strategy, test environment, risks, and assumptions."

Example:

"Create a test plan for an online e-commerce website that includes test scope, test objectives, entry/exit criteria, testing tools, test schedule, and risk mitigation."

---

2. Writing Test Scenarios & Test Cases

Prompt:

"Generate functional test scenarios and test cases for a [feature/module] of a [web/mobile] application. Use techniques like Equivalence Class Partitioning (ECP) and Boundary Value Analysis (BVA) where applicable."

Example:

"Write test cases for the login functionality of a banking application using BVA and ECP. Include positive and negative test cases."

Additional Prompt for Edge Cases:

"Provide edge case test scenarios for a [feature/module] of a [web/mobile] application."
Example: *"Give edge case test scenarios for an online payment gateway."*

---

3. Creating Test Data

Prompt:

"Generate valid and invalid test data for testing a [feature/module]. Consider scenarios for edge cases, negative testing, and boundary conditions."

Example:

"Generate test data for an e-commerce checkout process, including valid and invalid credit card numbers, discount codes, and shipping addresses."

---

4. Writing a Bug Report

Prompt:

"Write a bug report for a defect found in [feature/module] of a [web/mobile] application. Include steps to reproduce, expected vs. actual results, severity, priority, and screenshots (if applicable)."

Example:

"Generate a bug report for an issue where users cannot reset their password on an e-commerce website. The reset email is not sent after clicking 'Forgot Password'."

---

5. Generating Test Summary Report

Prompt:

"Create a test summary report for a completed testing phase of a [web/mobile] application. Include executed test cases, pass/fail rates, defects found, and recommendations."

Example:

"Generate a test summary report for the regression testing phase of an online banking app, including defect statistics and unresolved issues."

---

6. Risk-Based Testing Analysis

Prompt:

"Identify potential risks in testing a [feature/module] of a [web/mobile] application and suggest mitigation strategies."

Example:

"List risks and mitigation strategies for testing an airline ticket booking system."

---

7. Generating Exploratory Testing Scenarios

Prompt:

"Provide exploratory testing scenarios for a [feature/module] of a [web/mobile] application. Consider usability, security, and performance aspects."

Example:

"Generate exploratory test scenarios for an online food delivery app, focusing on usability and performance issues."
